

# KUNTO SPORT COMPETITION

Net Formaldehyde

## ABOUT US

KUNTO has over 40 years of PVC floor manufacturing experience. In China, KUNTO is one of the manufacturers who possess the most complete PVC flooring product series, the largest productivity and world-class flooring manufacturing technology and equipment.

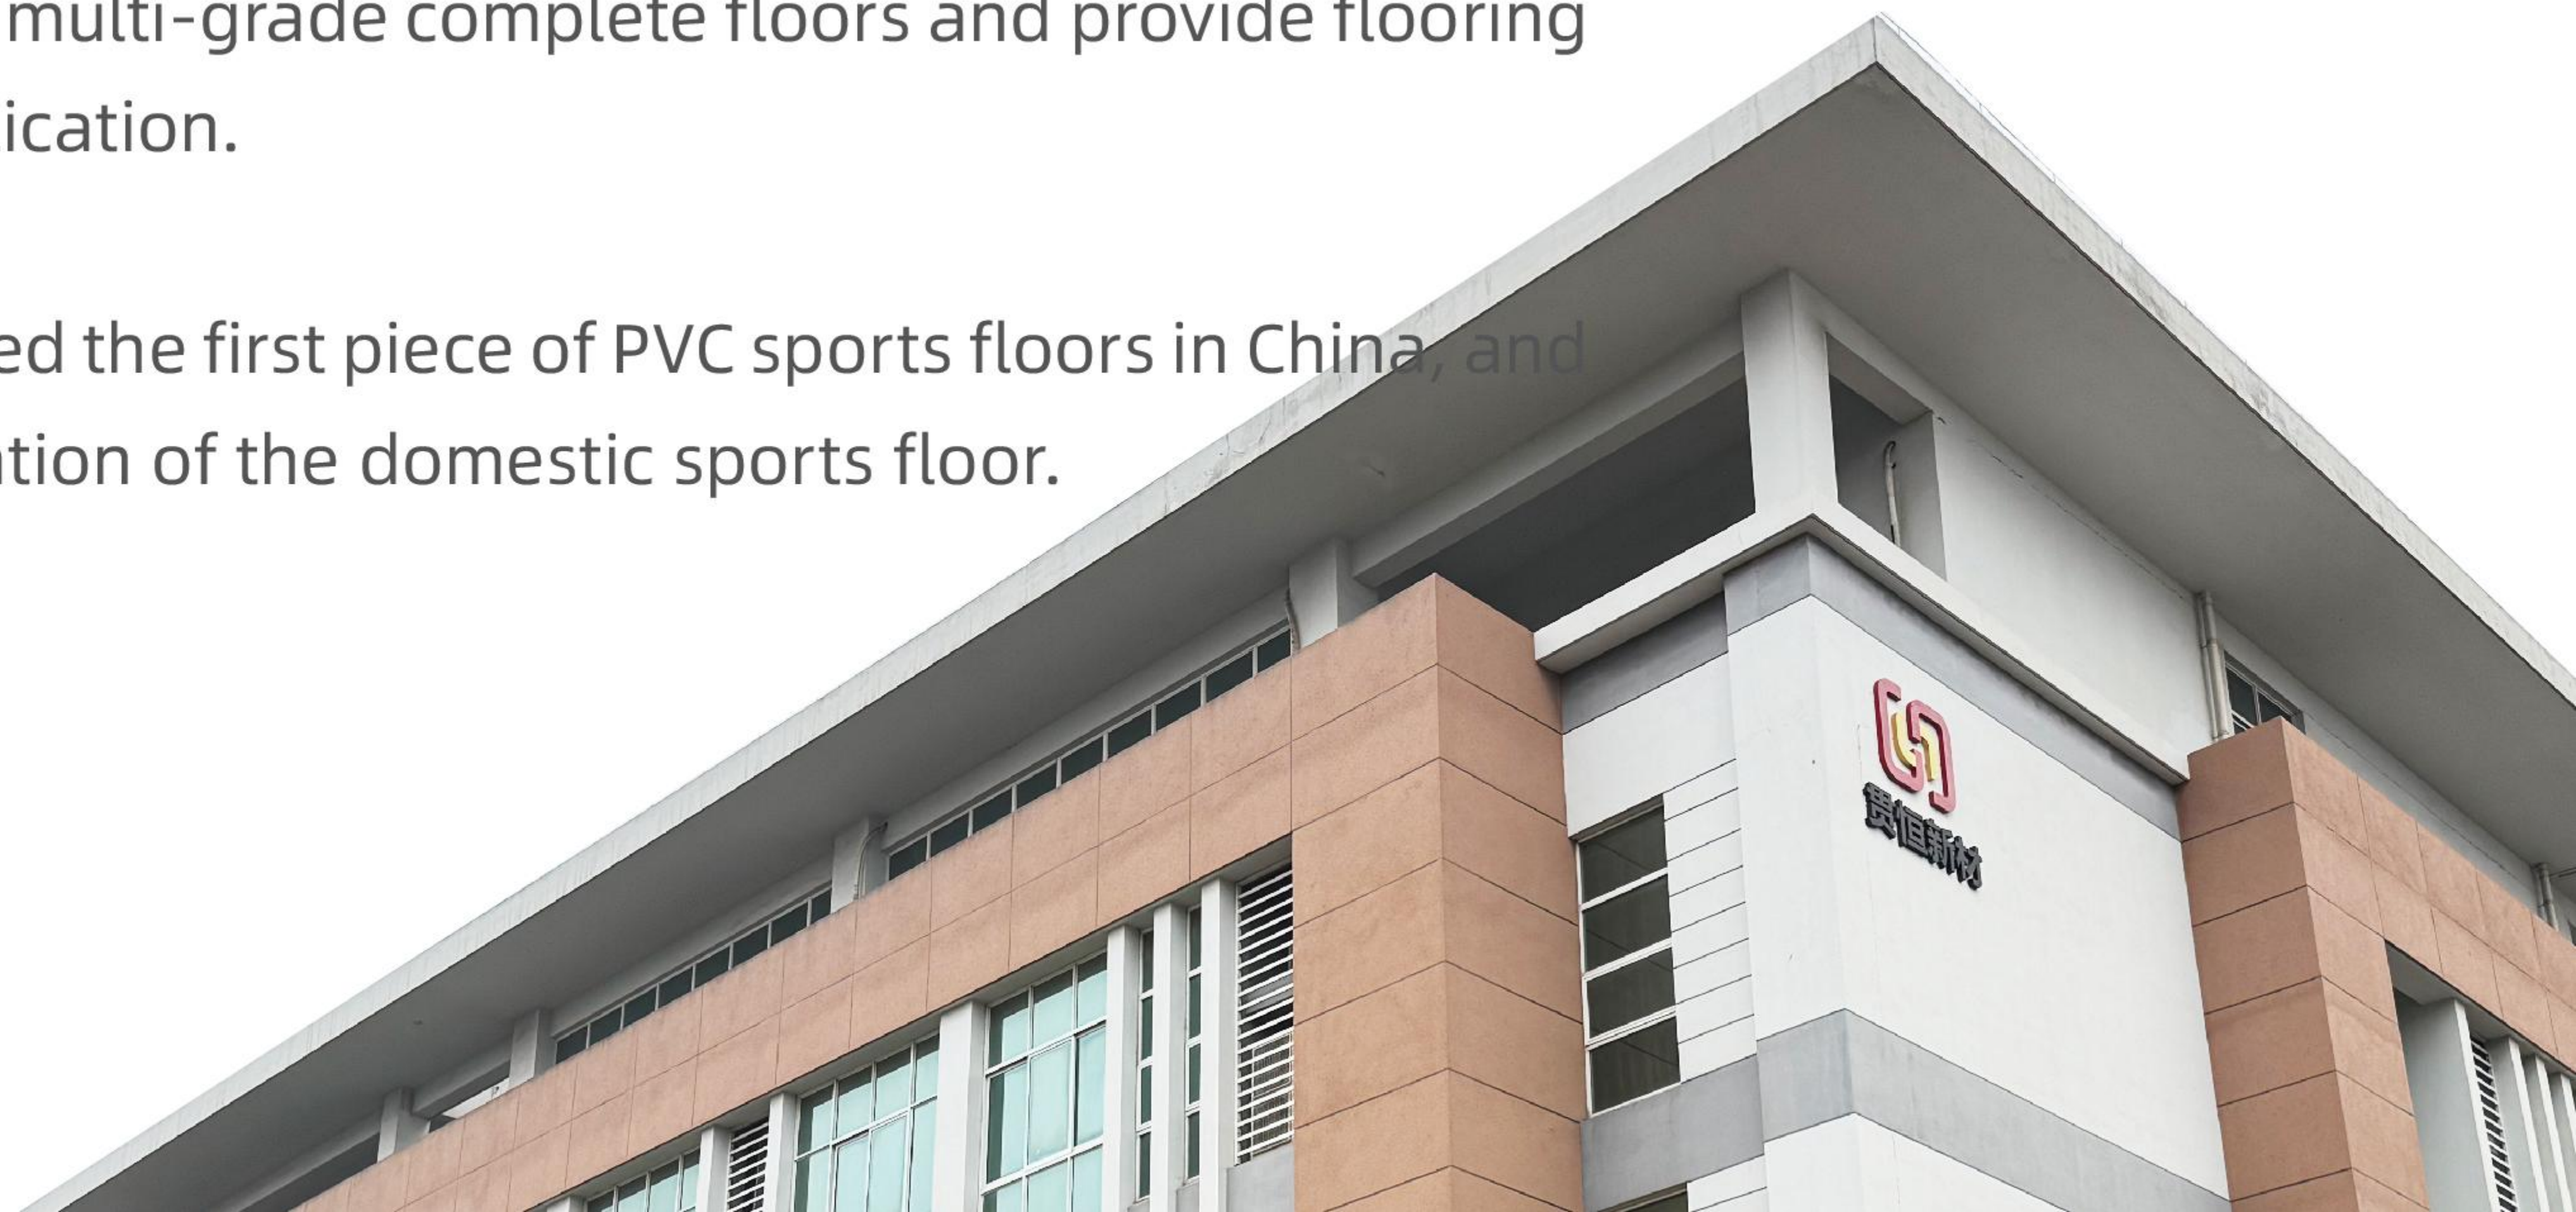

## ABOUT US

KUNTO special floors provide professional products and services for customers in special places, including sports fitness floors, outdoor and half outdoor floors, transportation floors, dancing floors, swimming pool anti-slip floors, moistureproof floors, nursing home floors, industrial workshop floors, and other fields, and modification of materials based on the industry, in order to reach to a better product application experience.

Haijiang has two manufacturing bases Changzhou and Wuxi. And Wuxi has professional production lines of sports flooring and special flooring, which can produce multi-series, multi-grade complete floors and provide flooring solutions in different application.

In 2004, Haijiang developed the first piece of PVC sports floors in China, and we are technical participation of the domestic sports floor.

KUNTO SPORT COMPETITION

Net Formaldehyde

Event sports floors: Professional Event with Excellent Performance

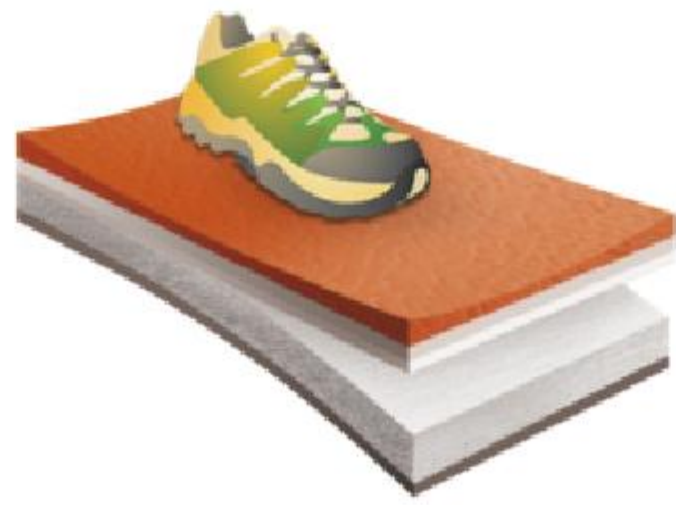

HAIJIANG SPORT TRAINING

Negative Oxygen Ion

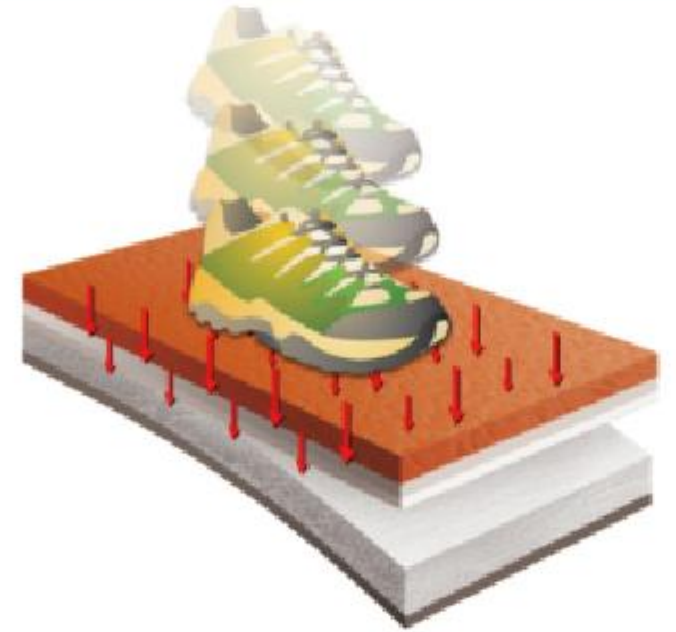

Competitive sports floors: Training Competition, Stadium Optimization

### Safe and Comfortable

The moderate varicose surface and calcium free closed-cell foam layer ensure comfortable and safe.

### Good Shock Absorption Performance

According to the application requirements, can provide 10%-50% of the shock absorption for the long-term protection of user's joints and cartilage.

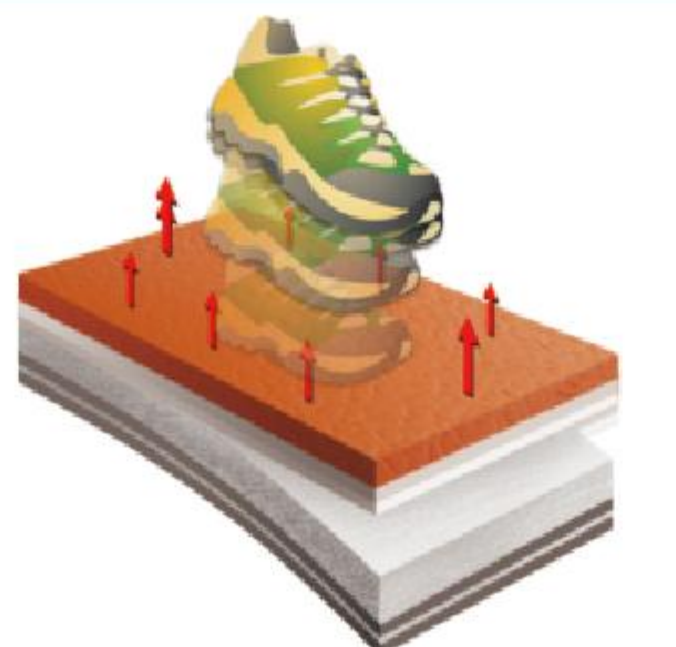

### Excellent Ball Bounce Performance

Meet the requirements of different ball games in entertainment and performance.

### Equilibrium Friction Coefficient

Provide the best grip and sliding balance, ensure smooth movement, reduce the possibility of a strain and fracture.

### The ground is firm and stable, free to run

High-density glass fiber layer, excellent structure stability, avoiding injury sprain, providing a safe sliding.

## PRODUCT ADVANTAGES

### 1. Professional Products

KUNTO Sports Floors conducts special research and development according to the performance requirements of different ball games. It can pass the certifications of various international competitions of ball games.

### 2. Excellent Performance

KUNTO Sports Floors has passed the full test of the European standard EN14904, which can prevent sports injuries well and provide safety protection for athletes.

### 3. Fire Retardant

KUNTO Sports Floors complies with B1 (C-s2, t0) grade in GB8624-2012, eliminates fire hazards and ensures the safety of venues.

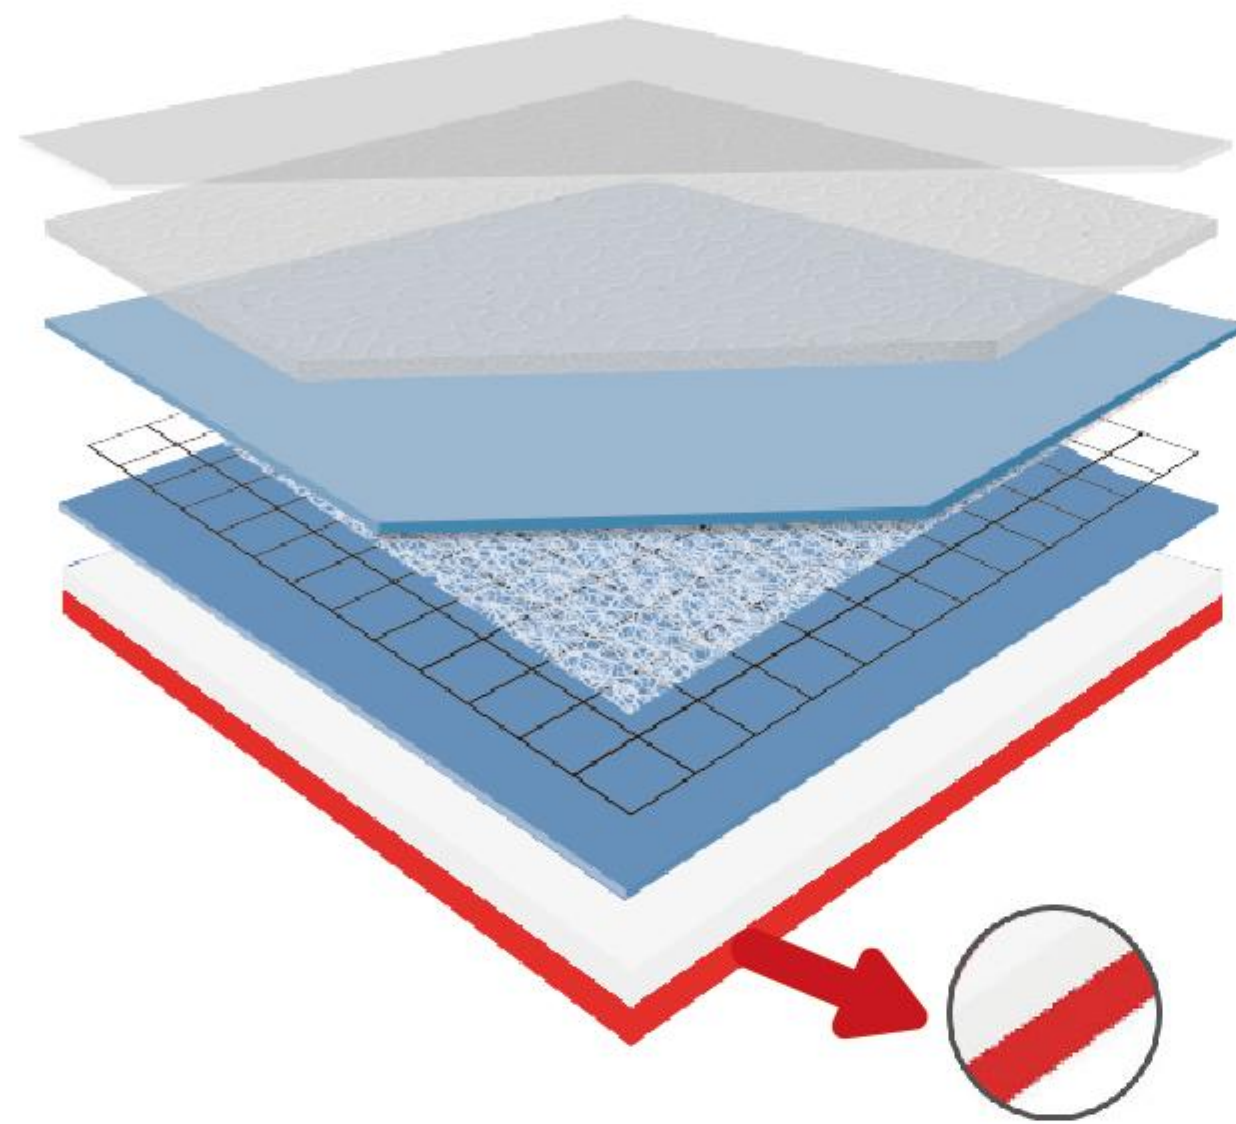

### 4. Purifying Formaldehyde

KUNTO Sports Floors can purify formaldehyde. After installation, the formaldehyde content in the indoor air can be rapidly reduced, and it can reach the normal standard in a few days.

## ABOUT KUNTO SPORT COMPETITION

**Calcium Free Two-color Closed-cell Foam Layer:white+red**

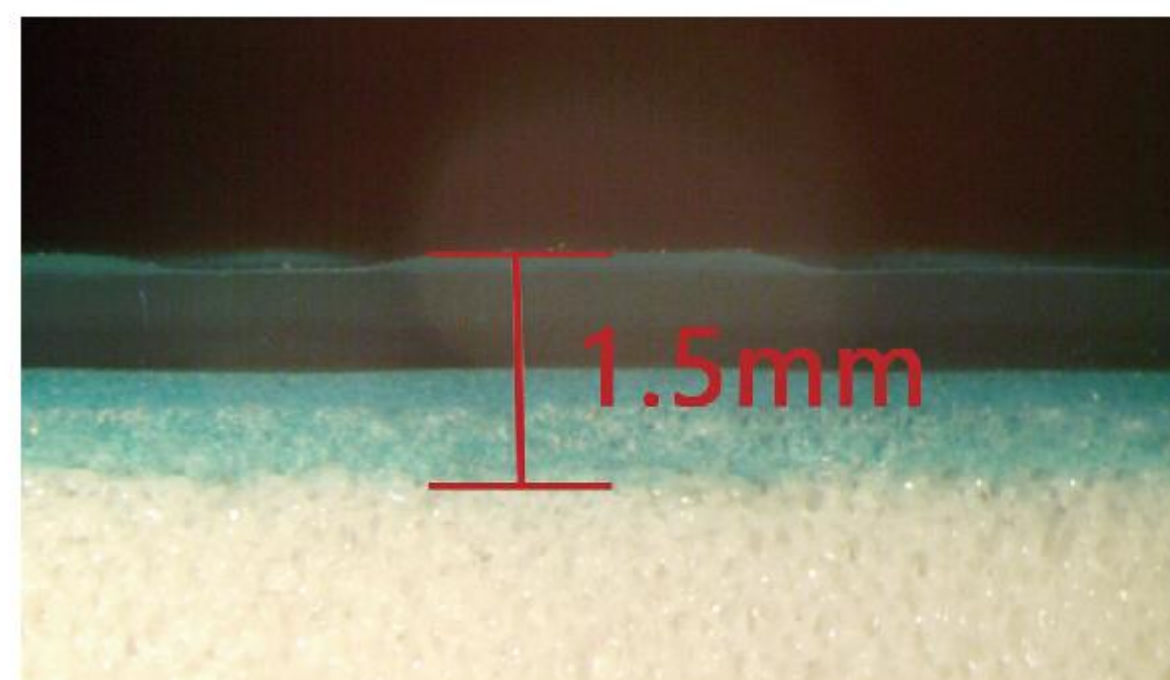

Net Formaldehyde

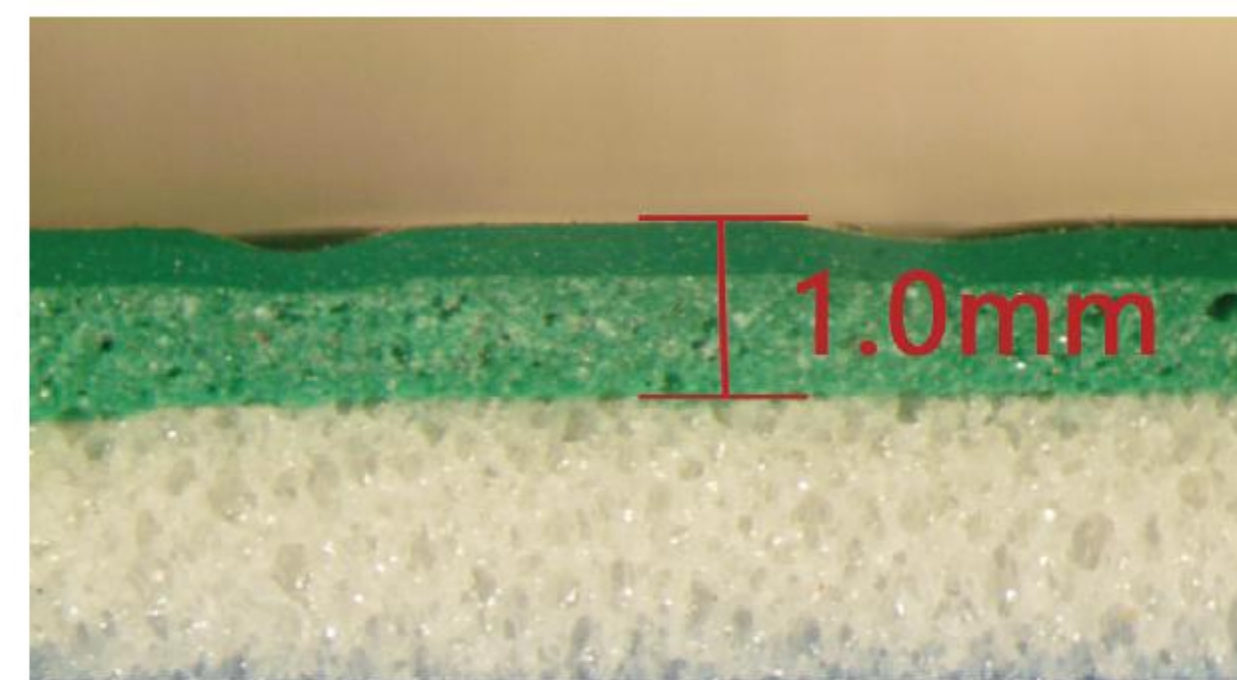

In 2022, KUNTO Sports Floors add the function of purifying formaldehyde, increase the rate of indoor formaldehyde decomposition, speed up the removal of formaldehyde content in the environment, ensure the delivery time and truly achieve healthy exercise.

## THE WEAR LAYER

VS

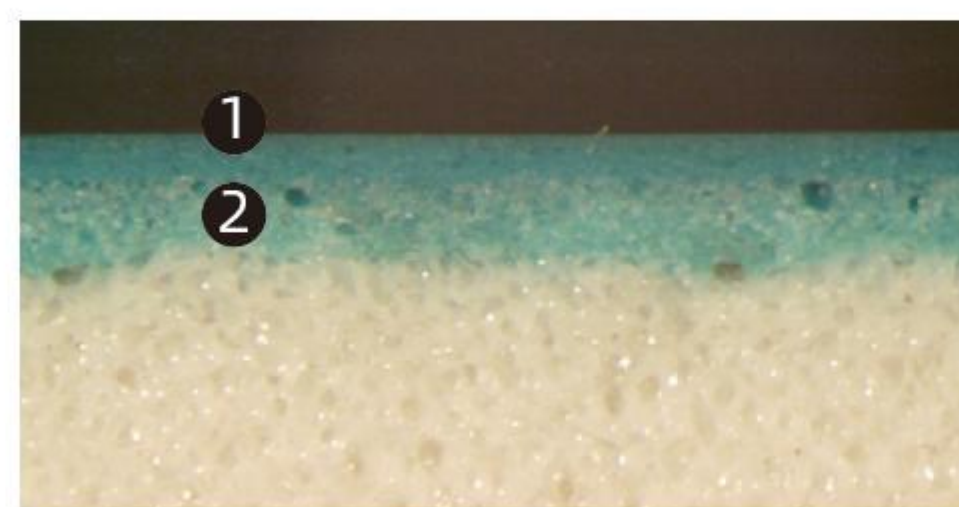

**KUNTO**

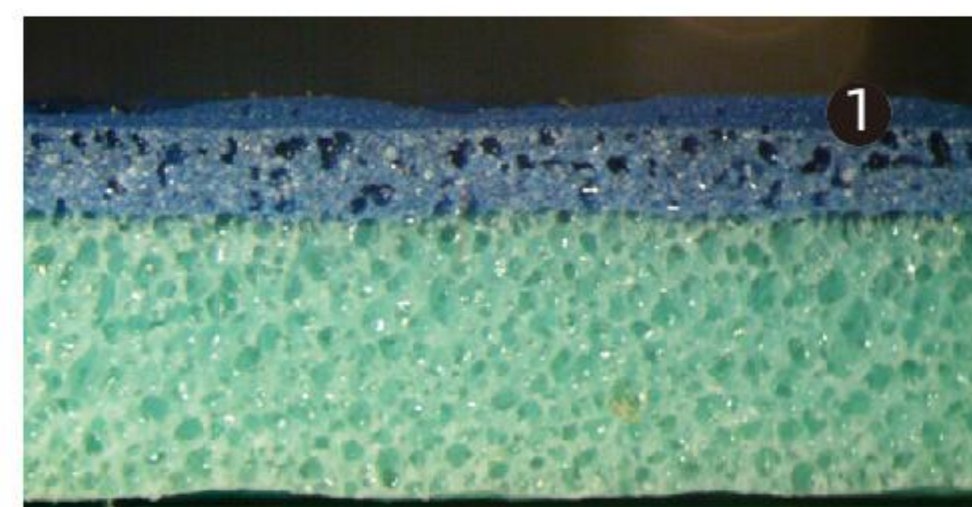

**OTHERS**

The wear layer thickness of Haijiang Sports Floors can reach 1.5mm-1.9mm, which is superior to other similar products in the market. It can effectively prolong the service life.

Different from other products on the market that only have a colored layer, 100% PVC wear layer + colored reinforced layer of Haijiang Sports Floors can effectively reduce scratches and ensure the product complete and beautiful.

VS

**KUNTO**

**OTHERS**

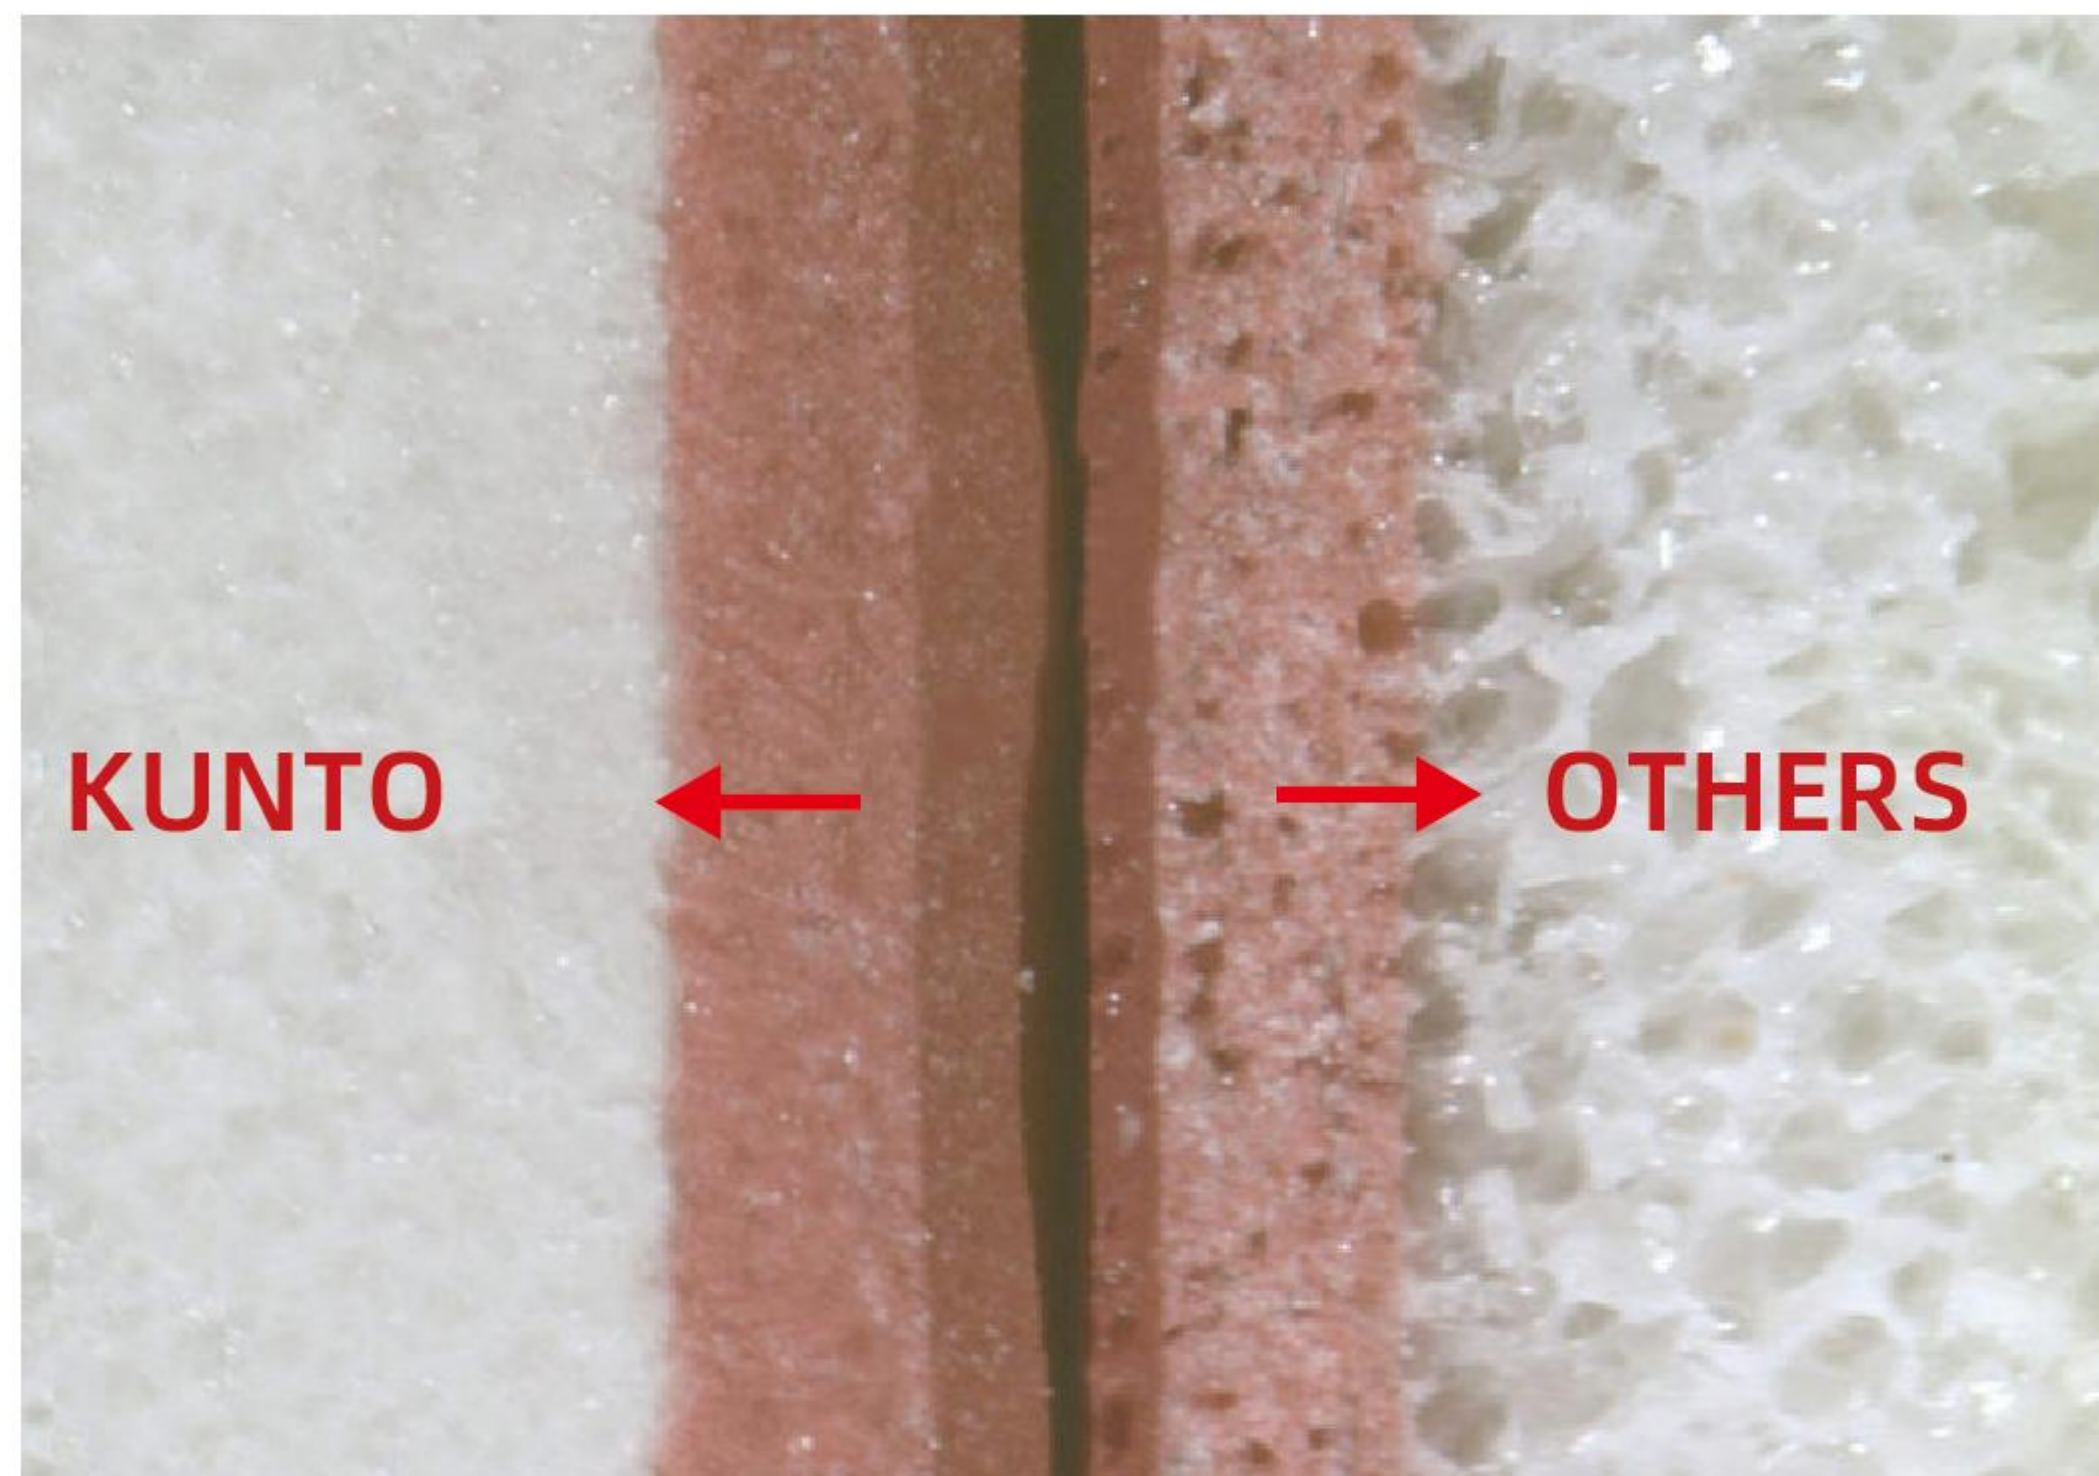

- ① 100% PVC Wear Layer
- ② Colored Reinforced Layer

- ① Colored Layer

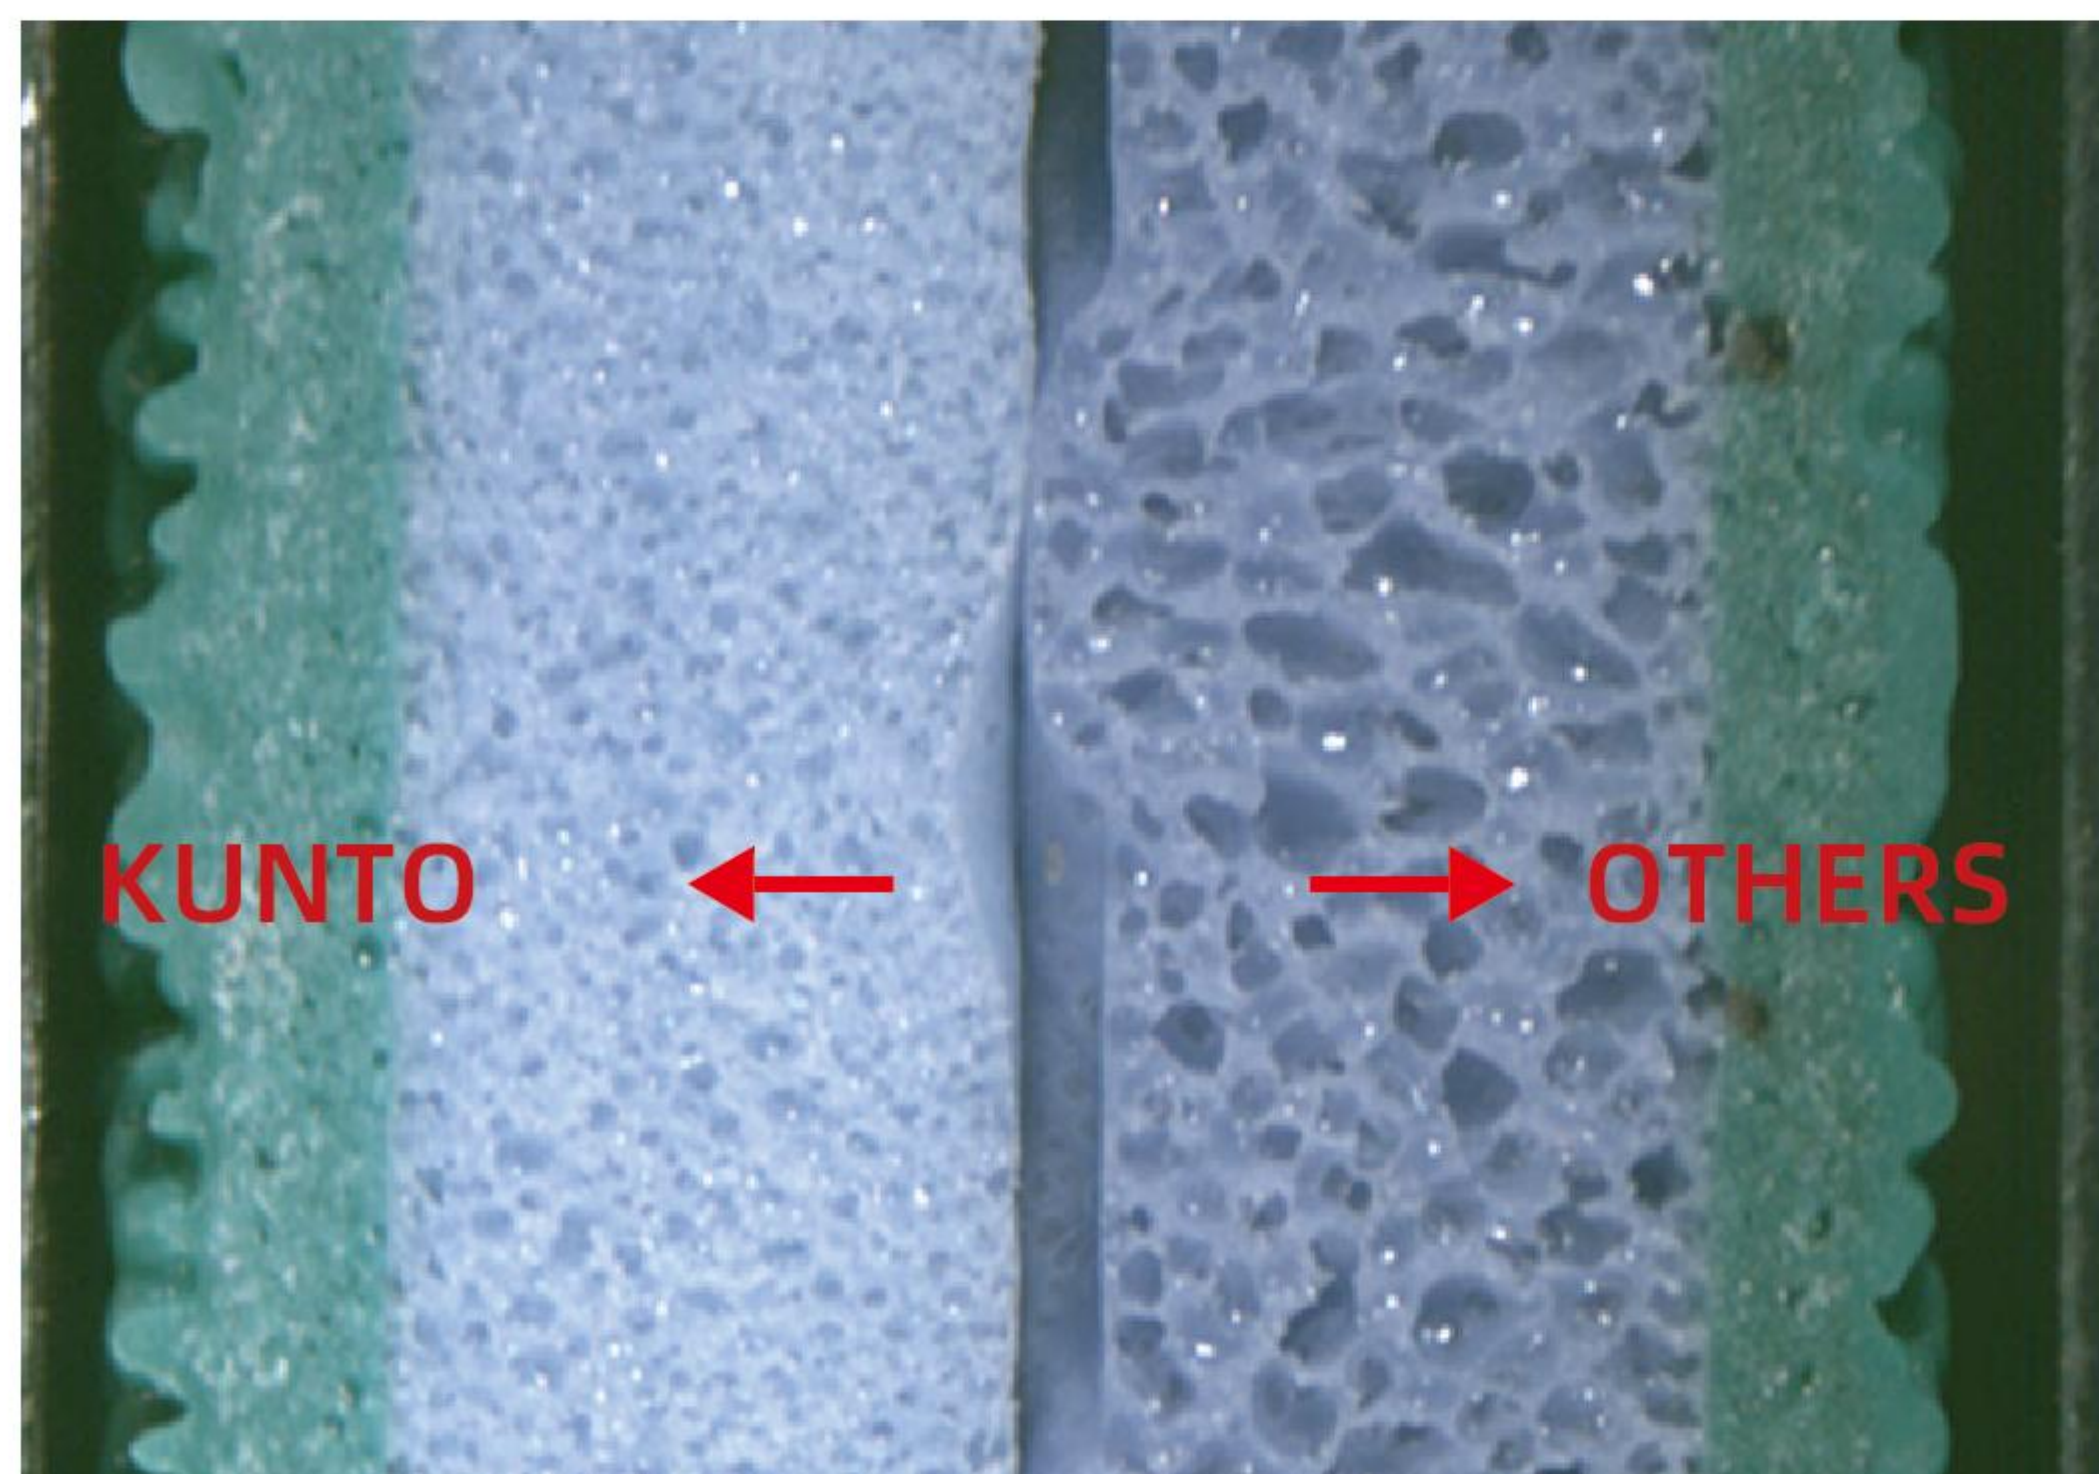

Enhances the rigidity and compactness of the product surface, and improves the performance of shock absorption and vertical deformation of the product.

## THE STABLE LAYER AND THE FOAM LAYER

The KUNTO **unique vacuum defoaming technology** of the stable layer increases the surface rigidity, the flooring has good compactness and not easy to deform, the better stability, with longer service life.

KUNTO Sports Floors adopts **low temperature foaming technology**, the foam layer has more uniform and delicate bubbles to ensure the rebound resilience.

## ENVIRONMENTAL PROTECTION

Phthalates free (no DOP)

Excellent indoor air quality

- After 28 days, TVOC emissions are 100 times lower than the EU's highest standard

\*TVOC AT 28 DAYS

Recycled raw materials

Reused resources

Green and environmental friendly products

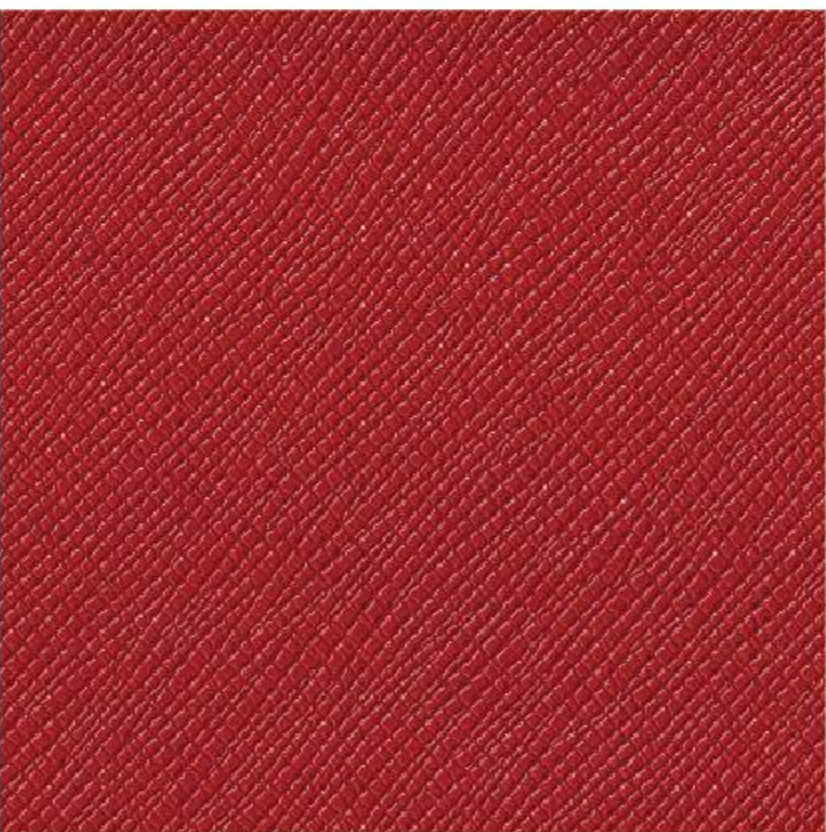

Healthy and safe use

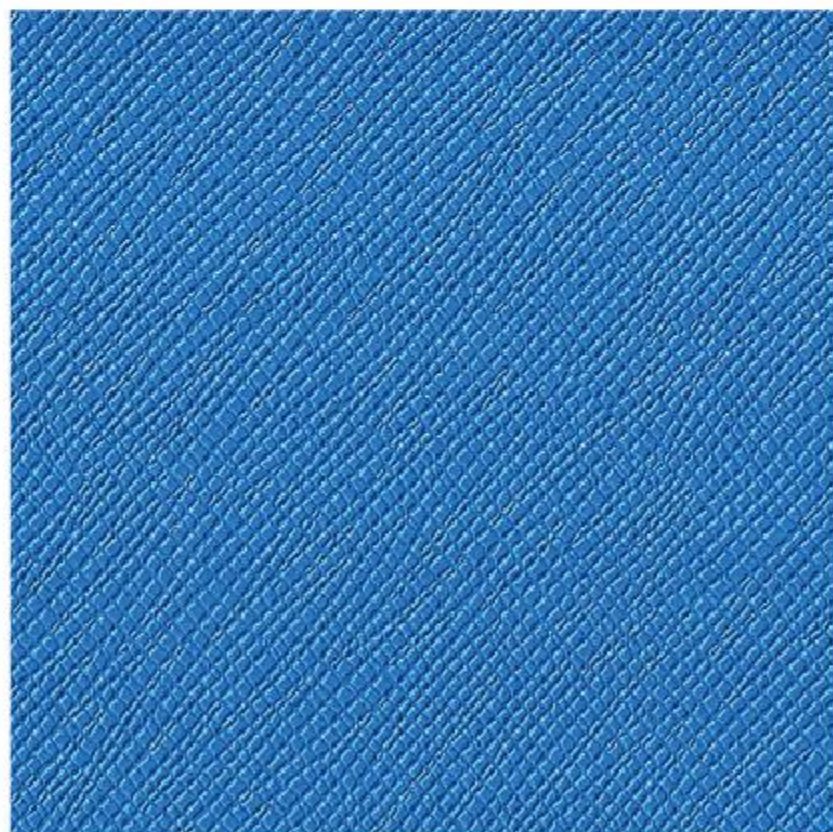

KUNTO Sports Floors is synchronized with Europe, using non-phthalate plasticizers to produce, while domestically produced PVC flooring is mainly made of phthalate plasticizers, and its biological toxicity is mainly estrogen and anti-androgen activity. It can cause endocrine disorders and affect the reproductive system.

| Pattern      | Length                    | Width | Thickness |
|--------------|---------------------------|-------|-----------|
| Grid/Athlete | 15m/20m/can be customized | 1.8m  | 5.5mm     |

## TABLE TENNIS SPORTS SERIES

- The table tennis athlete start and stop suddenly and frequently, the excellent elasticity can protect their knee very well, appropriate friction is good for flexible movement.
- After the special light radiance treatment, the flooring color is soft which can protect the athletes' eyes better, not easy to feel visual fatigue.
- The special surface embossing design meets the feature of table tennis, small sports area, multi-direction, frequency slip.
- The multilayer stable structure and high density foam layer will control the floor deformation which caused by heavy instrument in the minimum.

### Design For:

World Games and Championships

Sports Centers

Table Tennis Hall
